

SNOWCRETE (CEM I)

bringing materials to *life*™

BULK PORTLAND CEMENT (CEM I 52,5R)

For architectural uses, providing attractive and durable concrete, rendering and mortar. Uses include cast stone, architectural precast concrete, paving slabs, street furniture, terrazzo.

Snowcrete is a white Portland cement which complies with BS EN 197-1 CEM I 52,5R.

Snowcrete is a quality assured cement with independent third party certification and carries a CE mark.

Applications

To provide attractive and durable visual concrete, renderings and mortars.

A wide variety of white and light coloured finishes can be produced with selected white or light coloured aggregates. Coloured finishes with a bright and clean appearance can be produced with selected coloured aggregates or with pigments.

Typical applications of Snowcrete are:

- Cast stone.
- Structural in-situ and precast concrete.
- Cladding panels.
- Precast paving slabs and blocks.
- Road markings, kerbs, bollards.
- Street furniture.
- Terrazzo.
- Floor and wall tiles.
- Swimming pool finishes.
- Renders.
- Pointing mortars.
- Tile grouts.

Properties

- White colour.
- Does not contain any white pigments or additives.
- Similar setting time to Bulk Portland Cement.
- Higher early and later strengths than Portland cement CEM I 42,5.
- Naturally low in Chromium (VI) (below 2ppm).

Availability

Snowcrete is available in bulk tankers throughout the United Kingdom.

Conditions of Use

- Concrete, mortars and grouts containing Snowcrete must be specified and used correctly for best performance.
- The cement content must be correct and the water:cement ratio as low as possible consistent with satisfactory placing, thorough compaction and effective curing.

- The final finish quality of this material will depend upon the operative having the required skills and a familiarisation with the materials and its application methods.
- Lafarge Cement UK cannot be held responsible where workmanship has not been carried out in accordance with good practice.
- Snowcrete is manufactured from natural products, and slight shade variations may occur. Snowcrete will also have shade variations from differing manufacturing centres.

Technical Support

Further information and advice on this product and the full range of Lafarge Cement products can be obtained through the contacts listed below.

Health and Safety

Contact between cement powder and body fluids (eg, sweat and eye fluids) may cause irritation, dermatitis or burns. Cement is classified as an irritant under the Chemicals (Hazard Information and Packaging) Regulations.

For further information, including control of soluble hexavalent chromium, refer to the appropriate Lafarge Cement Health and Safety Information Sheets (Portland cements).

The information in this datasheet is accurate at the time of printing, but Lafarge Cement UK reserve the right to amend details as part of their product development programme.

Tricalcium Aluminate	C ₃ A (%)	5	
Tetracalcium Aluminoferrite	C ₄ AF (%)	1	

White Portland cement is predominantly compounds of calcium silicate and calcium aluminate with a small proportion of gypsum. It is produced by burning or sintering, at a temperature in excess of 1400°C, a finely ground mixture of selected raw materials which contain predominantly calcium carbonate, aluminium oxide and silica. The cooled clinker formed is ground under controlled conditions.
