Hardscaping solutions

...for living in the built environment

Creative solutions to hardscaping challenges

Lafarge Construction Solutions is able to undertake a range of hardscaping projects from paths, patios and driveways through to civic amenity, leisure, housing, stately homes and heritage sites

Strength in innovation

Lafarge Construction Solutions offers installed product solutions designed to be sympathetic to, yet enhance the environment in which you live, shop, rest and work.

With a wide choice of finishes we offer decorative products in concrete, asphalt and aggregates – tailored to the application.

We work very closely in the design and planning stage with our customers to understand the look and feel required, as careful product selection creates ambiance and enhances surrounding buildings and features.

Lafarge Construction Solutions is part of the Lafarge Group, a long established market leader in the design and production of concretes, asphalts, aggregates and cement in the UK.

Reassurance

All products are designed and produced by Lafarge, so installing them to our exacting standards is second nature. By dealing with only one supplier for everything from foundations through to the finishing touches, you can be assured that each stage of construction will be completed to the same high standards. This removes the problems that often occur when using multiple suppliers, providing peace of mind for our customers.

Flexibility

The right products coupled with the right choice of detailing - edges and features - gives a superior quality and feel to any hardscaping requirement. This flexibility provides the elements to create your unique hardscaping solution to enhance your living environment. The basics of groundworks, drainage and civil engineering are provided as part of your optimised solution.

“Experience shows, early involvement and collaborative working provides the greatest opportunity for embracing innovation to deliver successful solutions”

Robert Gossling,
Head of Lafarge Construction Solutions

Asphalts: AXOPAVE™ is our range of superior asphalt products offering enhanced aesthetic and sustainability features.

The range includes: AXOFLEX™, AXOALTOFLEX, AXOPHONE™, AXOCHILL, AXOCOMPAVE, AXOGOLD and ENVIROPHALT™

Hydraulic Bound Materials: AXOBASE™

Aggregates: performance sub-bases and decorative aggregates

Heavy Duty Pavements: AXOCRETE™

Safe working

Lafarge places the safety of our people and those within our operating environment as a cornerstone of our culture – and today we are leading our industry in meeting our goal of zero harm. All operations, from the smallest to the largest job site, meet the same high standards of safety awareness and also care for the people and nature in the surrounding environment.

Sustainable construction

Our offer includes pavement design where required – this allows for optimised construction solutions, with product choice aimed at providing long lasting durable surfaces requiring little maintenance.

Recycled materials are utilised where appropriate, and best use is made of materials arising on site that may be recyclable for use elsewhere.

Permeable pavement solutions including reservoir engineering is available – ask for Hydromedia™ pervious concrete.

Pervious concrete provides excellent drainage
